

PERSONAL SECURITY : CONCISE NOTES

Chapter-1: Security Officer Operations

1. Security Officer Utilisation

1.1. Security officers are best used as part of the complete protection plan and not as a stand alone resource.

1.2. Security management plans are based on understanding of the risks they are designed to control.

1.3. Number of Officers Required

1.3.1. The number of officers required for a facility is determined by several factors, including the following:

- Level of risk;
- Physical complexity and size of the facility;
- Number of employees;
- Nature of work;

1.3.2. Assuming that security officers work 40 hours a week, each post that is staffed 24 hours a day, seven days a week, requires a minimum of 4.2 officers. However, to compensate for sick leave, vacations, and holiday leave, each post requires 4.5 officers.

1.3.3. The number of support personnel required depends on the size and complexity of the security force.

2. Basic Functions.

2.1. Access Control.

2.1.1. A **primary function** of the security officer is access control, which is the regulation of movement into, out of, and within a designated building or area.

2.1.2. In times of crisis or unrest, security officers performing access control duties may also be assigned to check individuals' body temperature, watch for inappropriate dress (such as a heavy coat in hot weather), or identify persons behaving erratically.

2.2. Patrol.

2.2.1. Officers on patrol **observe** a wide variety of people, assets, and locations.

2.2.2. Patrolling officers may also be called upon to respond to door alarms and other irregularities.

2.2.3. Patrols are generally divided into two categories- foot patrols and vehicular patrols.

2.2.4. **Observation** is a prime task for the officer on patrol.

2.3. Escort.

2.3.1. In general, security personnel should **NOT** be required to escort visitors and customers on company property.

2.3.2. In some settings, security officers who have been trained to do so may escort people carrying large sums of money or special information or property.

2.4. **Inspection.** Inspection may be performed along with other assignments, such as patrol. Officers may also conduct special inspections for fire hazards; unlocked doors, safes, and windows and other security concerns.

2.5. **Monitoring.** Security monitoring is conducted from centralized security operations centres or global operations centres. The centralized control centres may be responsible for a single location or may monitor sites across an entire country or countries. Control centre security personnel must be comfortable with electronic systems, computers, and a sometimes high-stress environment.

2.6. **Emergency Response.** Security personnel have a responsibility to be prepared for emergencies. It falls to security officers to direct, coordinate, and carry out the responses established by security management.

2.7. **Dealing with Disruptive People.**

2.7.1. Security officers may be called upon to deal with people who appear mentally ill, are under the influence of alcohol or illegal substances, are temporarily unable to control themselves due to physical or emotional trauma, or otherwise behave in an irrational manner that could result in injury to themselves or others.

2.7.2. Addressing disruptive behaviour requires sensitivity.

2.7.3. The goal is to prevent harm from the person's acts and to control the person with a minimum of injury, discomfort, or embarrassment.

2.7.4. The most important consideration is safety and deescalating or eliminating any immediate danger.

2.8. **Observe & Report.** By being observant and understanding what they are looking for, security officers play a key role in the prevention or unwanted incidents,

2.9. **Public Relations.**

2.9.1. Security officers play a public relations role when they perform their protection duties and represent an employer. T

2.9.2. They are often the first and last contact a visitor, customer, vendor, or employee has with an organization.

2.9.3. Security personnel must ensure that rules are followed, but they must also treat employees and visitors in a fair and understanding manner. **Uncooperative** employee should be referred to a supervisor for administrative action.

3. **Officer Qualifications.**

3.1. **Regulations.**

3.1.1. In the United States, regulation of private security personnel resides with the individual states.

3.1.2. Other nations regulate private security officers and the private security industry through their own agencies and laws. India's private security companies are governed by the Private Security Agencies (Regulation) Act of 2005.

3.2. **Personal Attributes.** Character, Behaviour & Communication, coachability, appearance, Knowledge of job, ethics, education.

4. **Weapons.**

4.1. **Firearms.**

4.1.1. The decision whether to arm an officer should be based on the existence of one or both of the following conditions:

- There is a greater danger to life safety without the weapon.
 - The officer may reasonably be expected to use fatal force.
- 4.1.2. If officers are armed, the management of the facility assumes several responsibilities:

- Proper training of the officers to be armed;
- Selection of the appropriate firearms and ammunition;
- Proper maintenance of the firearms by a qualified gunsmith;
- Maintenance of records of the foregoing actions; and
- An adequate level of liability insurance.

4.1.3. Firearms may be appropriate when large amounts of cash are regularly handled and robbery is a risk.

4.1.4. The strategic value of issuing weapons is that potential assailants may be dissuaded from attacking a target if they know they will face armed resistance.

4.2. Less than Lethal Weapons

4.2.1. A full analysis of "will the benefits outweigh the risks" should be conducted.

4.2.2. Listed below are the most common types of less than lethal weapons.

- **Electroshock weapons.** These defensive weapons use electricity to stun or disable a subject. There are three common types: the TASER, the stun gun, and the stun baton.

- The **TASER** (a registered trademark) uses compressed gas to fire two barbed probes towards a target. The subject's neurological system is affected, and the target will generally lose control of muscles.

- Using a **Stun Gun** requires the officer to directly contact the subject with the device. Stun guns and stun batons may cause pain without disabling the subject. Also known as conducted electrical weapons (CEW) or conducted energy devices (CED), these weapons' effects are temporary, but may stop aggressive action.

- **Batons.** Perhaps one of the most utilized less than lethal weapons in security is the baton. Batons may be composed of wood, metal, or a plastic like resin. Improper use of a baton can cause great bodily injury and/or death.

- **Aerosol irritants.** The carrying of aerosol irritants or chemical agents by security officers is common. CS (2-chloroacetophenone), CN (0-chlorobenzylidene), and OC (oleoresins capsicum) are among the most frequent chemical compounds used. Commonly referred to as "**tear gas**" or "**pepper spray**," they are designed to irritate the mucus membranes and the eyes causing tearing, coughing, difficulty breathing, and skin irritation.

4.3. Policy Considerations.

4.3.1. **Use-of-Force Policy.** A comprehensive use-of-force policy: (UNODC 2020)

- Identifies the circumstances and limitations that govern use of force, including:
 - Use of force in individual self-defence
 - Use of force to protect others
 - Use of force to protect property, and response to serious crime
- Identifies the limits of the use of force acceptable to the government and organization.
- Can be used to determine whether a particular use of force is reasonable and necessary

4.3.2. **Police security force continuum.** A concept that is taught at most police academies and includes six broad levels.

- **Level One: Officer Presence.** A visible uniformed security officer or a marked vehicle is often enough to deter criminal or suspicious activity. At this level, **gestures should be nonthreatening.**
- **Level Two: Verbal Communication.** In combination with a visible presence, the spoken word can increase deterrence. The officer should begin with a calm but firm message with the goal of de-escalating the situation.
- **Level Three: Control Holds and Restraints.** Using bare hands to guide, hold, or restrain an Individual does not include offensive moves such as punching, tackling, or choking.
- **Level Four: Chemical Agent.** These defensive weapons may be used only when lesser tactics have failed or when a physical threat is imminent.
- **Level Five: Temporary Incapacitation.** When the situation is so extreme, violent, and immediate that it is necessary to temporarily incapacitate a suspect, nonlethal force from an empty hand to an intermediate weapon such as pepper spray, TASER, or baton may be used.
- **Level Six: Deadly Force.** Only in cases where there is immediate fear of death or great bodily injury at the hands of a perpetrator is deadly force acceptable.

5. Uniforms & Equipment.

5.1. Uniform.

5.1.1. Most organizations supply security officers with uniforms and equipment. Doing so ensures that the uniforms are, in fact, uniform in appearance and properly fitted to each officer.

5.1.2. Company policy should address whether uniforms should be worn off duty, including travel to and from work.

5.2. Body worn Camera.

5.2.1. Organizations that use the cameras cite their value in increasing accountability and providing evidence. Those who do not use them cite the cost of video storage, and the consequences when the cameras do not collect video due to malfunction or misuse.

5.2.2. To address privacy concerns, officers using the cameras must let members of the public know they are being recorded.

6. Organisational Structure.

6.1. **The efficiency of the security force depends on the adequacy and skill of its supervisors.**

6.2. Vertical Model.

6.2.1. In the vertical model, also known as the hierarchical model, authority comes from the top or senior manager and flows down through a series of managers and supervisors until it stops with the front-line staff.

6.2.2. They must also be able to administer disciplinary action as a corrective measure, not just a punishment.

6.2.3. Managers and supervisors need to maintain high personal standards in their own performance, to set an example and to motivate their subordinates.

6.3. Network Model.

6.3.1. Also called the flattened, horizontal, or open model,

6.3.2. In the network model, the emphasis is not on vertical or horizontal reporting relationships but instead on people coming together for particular tasks and then disbanding or regrouping as needed.

6.4. Proprietary Vs Contract Officers.

6.4.1. The decision of what type of security force to use should be based on factors such as the type of assets being protected, the level of risk, and the expectations of the officers instead of cost.

6.4.2. Proprietary Officers & Contract Officers Differences.

 CONTRACT SECURITY OFFICERS	 PROPRIETARY/IN-HOUSE SECURITY OFFICERS
•May be regulated by local licensing authorities	•Regulated by employer
•Hiring criteria set by licensing authority, contract stipulations, and employer's policies	•Hiring criteria set by employer
•Often receive less specific training, possibly less supervision	•Usually receive more training, supervision
•Work at varied settings, changing schedules	•Usually have consistent schedules
•Contract-driven work conditions	•Employer-driven work conditions
•High turnover typical	•Generally better retention
•Loyalty to contract provider	•Loyalty to hiring organization
•Inclined towards short-term assignments	•Longer term assignments
•May need flexibility to report to multiple bosses; chain of command is less clear	•Clear chain-of-command
•Less integrated into or part of workplace	•More integrated into and part of workplace
•May require adaptability for frequent retraining on different sites/assignments	•More progressive site-specific training
•Lower hiring and overall costs	•Higher hiring and overall costs
•More job oriented	•More career oriented

6.3. Hybrid Security Program.

6.3.1. The security force is made up of both proprietary and contract officers

6.3.2. Hybridization in security has always worked well between live security officers and security equipment and technology.

7. General Orders.

7.1. General orders may be thought of as canons or bodies of principles for protection officers.

7.2. Some commonly used general orders are as follows:

- Familiarity, fraternization, and unnecessary conversation with persons while on duty are prohibited.

- Officers will maintain a military or professional bearing.
- Smoking and eating on duty are prohibited. •
- All statements to the media will be made by the designated media spokesperson or public information officer (PIO).
- Security officers must enforce regulations diplomatically.
- Officers shall wear the employer's uniform and use the employer's equipment only when and where authorized.
- Officers will promptly report any criminal conviction to their employer.
- Officers will remain at their post unless properly relieved or otherwise directed.
- Officers leaving a post will brief their relief fully and pass along any orders that have been issued.

8. Post Orders.

8.1. Post orders are the most important written instructions for the security force. Post orders do the following:

- Express the policies of the protected enterprise.
- Summarize required officer duties.
- Avoid the problems of word-of-mouth instructions.
- Provide a basis for site-specific training.

8.2. Clear and understandable post orders are important in serious incidents that may call into question the integrity, competence, or capacity of an officer.

8.3. Post orders should be developed with the following criteria in mind:

- Each order deals with a single subject.
- Each order is as brief as possible.
- Each order is written in simple, easy-to-understand terms.
- Orders are indexed in detail.

8.4. In a fixed post, post orders should be stored at a designated location.

8.5. For a patrol post in a vehicle, the post orders should be carried in the vehicle.

8.6. Each set of post orders should be reviewed periodically to ensure that the orders are current and complete.

9. Supervision.

9.1. Supervision.

9.1.1. The quality of assets protection is a direct function of local training and local supervision.

9.1.2. Training occurs when a supervisor observes the ongoing performance of an officer and provides feedback in response to situations that were not correct or where the officer appeared unsure or confused.

9.1.3. Other training is provided when new material is introduced that requires familiarization by the individual officer or the entire shift.

9.1.4. Training also occurs when new security personnel are introduced to the site.

9.2. Evaluation.

9.2.1. The assessment must include at least the following items.

- Personal appearance and condition of the officer;
- Physical condition of the post;
- Availability and condition of all required personnel and post equipment, including the post orders;

- Quality of officer response to training questions or situations; and
- Quality of officer response to actual situations arising at post during the visit.

10. Behavioural Theories.

10.1. **Abraham Maslow.** People are motivated differently, depending on those where they stand in a hierarchy beginning with the most basic needs. Once a need is satisfied, it is no longer a motivator, so providing more of the same may not result in improvement.

- **Physiological.** Needs geared toward survival, such as food, shelter, sleep.
- **Safety and security.** Needs concerned with the economic, physical, and mental well-being of the individual.
- **Social or affiliation.** The desire to be liked and accepted.
- **Ego.** Needs concerned with knowledge, independence, achievement, status, self-confidence, and the respect of others.
- **Self-actualization.** Needs related to an inner urge to actualize individual potential. Recognition of the employee can be a powerful positive influence.

10.2. **Douglas McGregor.** Supervisors relate to subordinates on the basis of contradictory assumptions termed **Theory X** (workers are naturally lazy and avoid responsibility) or **Theory Y** (work is natural and workers can be self-directed, motivated, and creative).

10.3. **Frederick Herzberg.** A two-dimensional model involves hygiene or maintenance factors and satisfiers or motivators. Hygiene factors appeal to an individual's avoidance mechanism while satisfiers or motivators make the job more challenging and lead to personal growth. The manager should work to provide a proper balance between the hygiene factors and the motivators, while at the same time allowing for individual preferences.

10.4. **Chris Argyris.** Traditional organizational principles, structures, and procedures are incompatible with the mental health of employees. These make subordinates passive and submissive, allowing them to have little direction of their own work, and they become apathetic, engage in self-protective defence mechanisms, or just fight the system.

10.5. **Warren Bennis.** The organization can be an adaptive, problem-solving, innovative system that copes with rapidly changing environments. Future organizations will be more inclusive and exhibit these characteristics:

- **Integration.** Synthesizing employee needs and management objectives.
- **Social influence.** Distributing authority and power effectively.
- **Collaboration.** Managing and resolving conflicts.
- **Adaptation.** Responding appropriately to changes induced by the environment.

11. Work Environment.

11.1. **Big Five Model of Personality.** The purpose of this model is to categorize traits into one of five dimensions. Thus, each dimension includes multiple traits. The five categories are **surgency, agreeableness, adjustment, conscientiousness, and openness to experience.**

11.1.1. **Surgency.** This refers to leadership and extroversion. When people have this trait, also referred to as dominance, they want to be in charge. They wish to get ahead through both competition and influence. People weak in surgency are followers.

11.1.2. **Agreeableness.** This dimension refers to a person's ability to get along with others or not and ranges from warm, easy going, compassionate, friendly, and sociable at one end to cold, difficult, uncompassionate, unfriendly, and unsociable at the other.

11.1.3. **Adjustment.** This personality dimension includes traits related to emotional stability and ranges from strong to weak or emotionally stable to emotionally unstable. High adjustment suggests being calm under pressure and being relaxed, secure, and positive. Low adjustment suggests being out of control, poor under pressure, nervous, or insecure.

11.1.4. **Conscientiousness.** This dimension includes traits related to achievement. Descriptions range from responsible and dependable to irresponsible and undependable. Conscientiousness also suggests credibility, conformity, organization, and a willingness to work hard to accomplish goals.

11.1.5. **Openness to experience.** This dimension includes traits relating to willingness to change and try new things.

12. **Serious Misconduct.** Security managers and supervisors must pay immediate attention to some forms of security officer misconduct, such as the following:

- Acts of misconduct involving weapons;
- Use of unreasonable force
- Conduct that takes the security officer away from an assigned post without justification
- Accusations of criminal conduct (such as fraud, theft, or conducting a body search on an individual who has revoked consent)
- Conduct that interferes significantly with the officer's ability to perform assigned duties.
- Among the most serious offenses are those involving the use of alcohol or drugs on duty.

Chapter – 2: Training the Security Officer

1. Key Training Concepts.

- Establishing a training program requires persistence, humility, empathy, and creativity.

1.1. **Learning.** Learning can be separated into various domains: cognitive (knowledge-based), affective (attitudinal or perceptual), and psychomotor (physical skills).

1.1.1. Cognitive learning.

- The intellectual aspect of learning-cognition-includes the amount of material that is learned and the theory related to the material.
- Cognition a key component of problem solving, involves grasping a theory and applying that theory to practice.

- For cognition to take place, there must be a full and complete explanation of a topic.

1.1.2. **Affective learning.**

- How a person views a situation is changed by affective learning.
- Training of this type includes understanding various cultures, dealing with disabled persons, practicing safety compliance, and exploring the methods used by adversaries to acquire information.
- Securing assets against an adversary requires an appreciation of that adversary.
- Affective learning should be integrated within the cognitive and psychomotor aspects of the instructional program.

1.1.3. **Psychomotor learning.**

- The physical or hands-on aspect of learning falls under the psychomotor domain.
- Psychomotor training encompasses everything from equipment operation to defensive driving tactics to emergency response skills.
- Psychomotor development requires repetition, practice, and refresher courses.

1.1.4. **Retention and Transfer.**

- Retention, or the amount of learning that remains with the learner over time, requires reiteration. Having the student perform the task while listening to the instructor promotes the highest retention of information.
- Transfer concerns the relevance of the learning to the job environment, thereby ensuring that what is learned in the classroom is put to use.

1.2. **Socialization.**

1.2.1. Socialization includes the process by which an employee learns and adopts workplace values.

1.2.2. Training is a major part of formal socialization. It can be thought of as occupational or professional socialization.

1.3. **Education, Training & Development.**

- The professional experience that officers acquire through a combination of education, training, and guided experience leads to personal development.

Education + Training + Guided Experience = Development

1.3.1. **Education.**

- The acquisition of knowledge and information leads to **education**, which broadens a person's perspective and appreciation.
- Education may not specifically apply to a job but is concerned more with the "why" rather than the "how to" aspect of job performance.

1.3.2. **Training.**

- Training is the acquisition of the knowledge, skills, and abilities that directly relate to job performance.
- It is the formal process used to facilitate learning. Training has a definite purpose- for example, teaching security officers such specifics as how to operate detection equipment, conduct interviews, or monitor alarms.
- training must be continuous and should include repetition.

1.3.3. **Development.**

- Job incumbents must learn to understand (through education) and acquire some degree of proficiency (through training) to develop as an employee.
- Experience must be guided or directed by education and training.
- Development is the culmination of education, training, and experience mixed with a substantial dose of professional commitment.

2. Benefits of Training.

- 2.1. Improved Job performance
- 2.2. Ease of Supervision
- 2.3. Procedure review
- 2.4. Staff motivation
- 2.5. Reduced Turnover
- 2.6. Legal protection

3. Identifying Training Needs. Identification of needs based on.

- 3.1.1. Legal requirements. As mandated by government or by contractual agreement.
- 3.1.2. Standards, guidelines, or industry best practices.
- 3.1.3. Performance deficiencies noted.
- 3.1.4. From the employees themselves.

4. Training Program Assessment & Design.

4.1. Behavioural Objectives.

- 4.1.1. Based on the identified training need, behavioural objectives should be written for the actual training program.
- 4.1.2. Each objective should describe the desired task, the conditions for performing the task, and the criteria for an acceptable performance of the task.
- 4.1.3. Since the objectives guide the development of instruction and tests, they can be most effective when written with the help of a consultant.

4.2. Designing the Instruction.

- 4.2.1. The key aspects are the ability to design the instruction and then to prepare tests and documentation.
- 4.2.2. Developing training : Internal team, external team or purchasing off-the-shelf
- 4.2.3. ***Certified Trainer Syndrome***, which can occur when an instructor purports to be certified on a topic but has no background to teach a class.

4.3. Training Evaluation.

- 4.3.1. The number or proportion of employees exposed to training is considered the learning contact.
- 4.3.2. When evaluating training, the learning contact is important because programs that the entire security staff does not participate in are of limited, and perhaps questionable, value.
- 4.3.3. Participant evaluations are usually not good as validation tools. however, because they do not measure actual learning. Rather, they validate what the learners thought they learned.
- 4.3.4. Tests should be as objective as possible: the respondent either supplied the correct answer or did not.
- 4.3.5. Test design is one part of training development where external experts should be consulted.

5. Training Methodology.

5.1. Lectures.

5.1.1. A traditional method used to instruct personnel. Lectures are appropriate for introducing a topic and setting the course of the instruction.

5.1.2. Lectures are not appropriate for individualized instruction.

5.2. Case Studies.

5.2.1. The case study method is useful for guiding the learner in any topic where discretionary judgment is necessary.

5.2.2. Case studies can be used to supplement lectures and give them life.

5.2.3. Case study method works best when students work together in groups where there is active discussion.

5.3. Job Aids.

5.3.1. Job aids are convenient reminders on how to do a task.

5.3.2. Also called "takeaways, job aids help ensure that correct procedures presented previously to officers in training sessions are being followed.

5.3.3. They are a supplement-not a substitute-for training.

5.4. Distance Learning.

5.4.1. Instruction where the learner and teacher are at different locations but are still able to communicate is called distance learning.

5.4.2. can be delivered in a number of formats, from the old-fashioned correspondence course to computer-based instruction.

5.4.3. College research papers could be considered a form of distance learning.

5.5. On the Job Training.

5.5.1. On-the-job training (OJT) is easy to develop. It is an especially useful way to ensure that transfer of learning, from instructor to student, has occurred.

5.5.2. OJT works well when it is structured with specified procedures.

5.6. Mentoring.

5.6.1. In a mentoring program, a new security officer, after completing pre-assignment training, is placed with a mentor who coaches him or her on the job.

5.6.2. Bridge any gaps between classroom-based pre-assignment training and the realities of the job environment.

5.6.3. The mentor teaches but does not evaluate.

6. Obstacles to Training.

6.1. Budgetary Limitations.

6.2. Scheduling.

6.3. Lack of management expertise in Training.

7. Training Strategies.

7.1. Off duty training.

7.2. Tuition re – imbursement.

7.3. Recognition programs.

7.4. Integrated training.

7.5. Video Collaborations.

7.6. Supervisory training.

7.7. Internships.

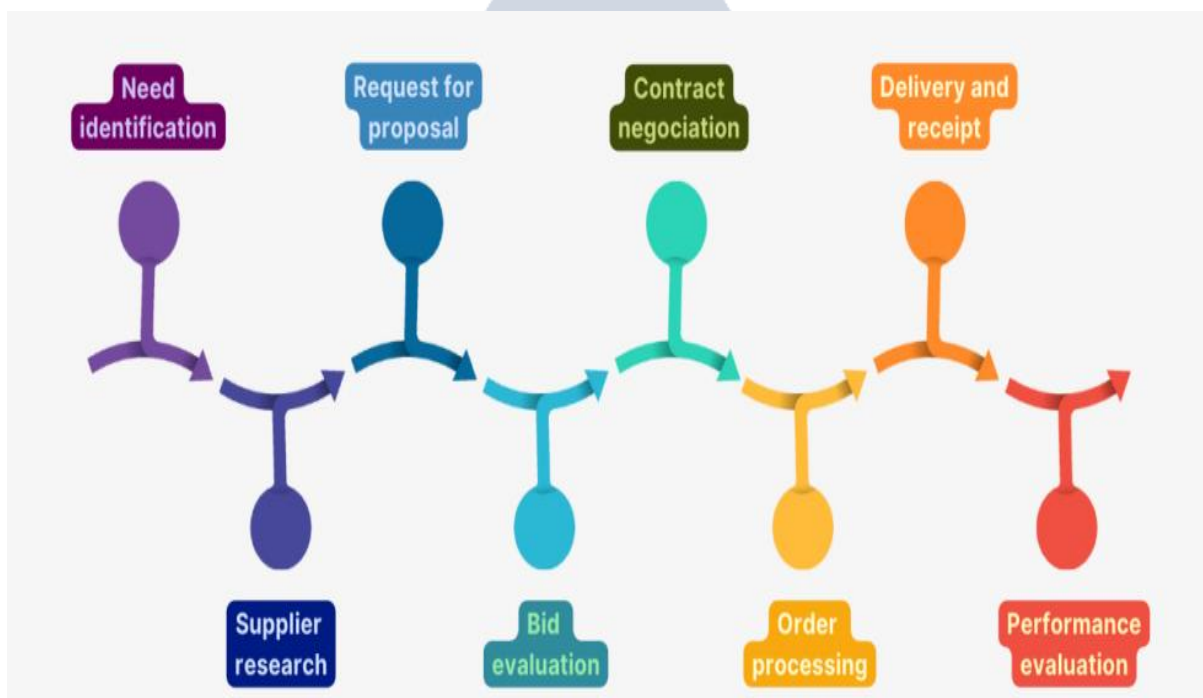

Chapter – 3: The Security Services Contract

1. Public, Semi Public & Private Areas/ Property.

1.1. **Public areas.** Officers deal with people and activities in areas or buildings with unrestricted access. Examples include residential areas and public events like parades and street festivals.

1.2. **Semi-public areas.** These sites may have some form of access restriction or impose an entry fee. Retail stores, banks, hospitals, sporting and entertainment events, and museums fall into this category.

1.3. **Private facilities and property.** These are areas or facilities where entry is limited to certain people. Examples include manufacturing plants, warehouses, and offices.

Contact Life Cycle

2. Client Responsibilities.

A security services contract is a legally binding agreement between at least two organizations, detailing the expectations, responsibilities, and obligations of both parties.

2.1. Request For Proposal.

Personnel costs are generally the largest item in the operating budget of a security department.

2.1.1. Security needs should be evaluated sufficiently to establish a clear case for the use of security officers.

2.1.2. Broad criteria to be considered by the client when choosing the contractor.

- Consistent performance.
- Prompt, efficient, and positive response to client concerns.
- Competitive pricing.

2.1.3. Define the **Scope of Work**: based on an examination of the site, the layout of facilities, building design, internal business processes and contract length.

2.1.4. **Solicitation Summary**. Purpose is to give vendors as much information as possible so they can produce comprehensive proposal packages.

2.1.5. After the solicitation summary is released, the RFP should be distributed. The RFP provides a tremendous amount of detail regarding the services requested by the client.

2.2. Scope of Work.

2.2.1. The client company must define the scope of work and required standards of performance thoroughly and precisely.

2.2.2. The client company must also be realistic regarding the risks involved in the work, based on a recent risk assessment.

2.2.3. The scope of work should state the security tasks, the days and hours of performance, and the total number of hours to be worked.

2.3. General & Special Orders.

2.3.1. It is the **client's responsibility** to provide general & specific orders; however, in practice the task often falls on the contract security provider.

2.3.2. Regardless of who actually prepares the orders, ultimately it is up to the client to review and approve them.

2.3.3. Orders should cover such topics as personal conduct, duties of each post, disciplinary action, reporting procedures, company rules and regulations, and the authority the security officer has on behalf of the client company.

2.4. Bidder List.

2.4.1. The quality of the service provided by a contract agency is directly related to the quality of local supervision and local training.

2.4.2. Companies contracting for security services should specify hourly pay rates rather than allowing guard agencies to do so.

3. Agencies Responsibility.

3.1. Operating Agreement.

3.1.1. Based on the RFO, the agency provides a detailed operating agreement, which lists each party's responsibilities.

3.1.2. Agreement should reflect the client's unique security requirements based on risk assessment.

3.1.3. A detailed operating agreement also helps ensure that the client and contractor jointly participate in policy and procedural decisions affecting contract execution and officer performance.

3.1.4. The agency should ensure that claims made in its marketing literature about officer qualifications, screening, orientation, and training are accurate.

3.1.5. Areas of non-performance must be clearly defined, and the financial penalty must be sufficient to stimulate performance.

3.1.6. Other factors affecting agency performance include poor scheduling, lack of adequate supervision, limited opportunities for advancement, and little or no recognition.

3.2. Bidders Conference.

3.2.1. Considerable care should be taken in compiling a list of qualified contract agencies. In most cases, several qualified contractors should be included to ensure healthy competition.

3.2.2. The client security manager should check the credentials of the company.

3.2.3. Benchmarking with nearby companies regarding experiences with different security companies is beneficial.

3.2.4. Qualified bidders should be invited to a bidders' conference where they can discuss the statement of work, general and special orders, and the proposed operating agreement.

4. Bid Evaluation.

4.1. Criteria.

4.1.1. The first criterion is the strict proposal submission deadline.

4.1.2. The next criteria apply to the proposal's contents -accuracy in responding to specific elements of the RFP should be considered.

4.1.3. Additional evaluation criteria include promptness of officer licensing, training provided, and staff experience in providing security services in the client's industry.

4.1.4. As rule of thumb, if contract personnel work more than **400 hours per week**, the contracting organization should hire its own security supervisor.

4.1.5. Contract Security agencies can be judged on the undermentioned parameters.

- *Personnel – QR, Selection, Background checks*
- *Training – Pre- Hire, Role based training, Statutory, Annual Training*
- *Supervision – Proprietary/ Contract, Selection & Training*
- *Wages & Benefits – As per regulations, skill pay etc*
- *Insurance*
- *Operational Issues*
- *Cost of Service*

5. Contract Award.

5.1. Post deciding the contractor, formal negotiations are carried out.

5.2. Both parties review the risks and the responsibilities & agree to them.

5.3. Terms & conditions of the contract/ agreement to be strictly enforced.

Chapter – 4: Consultants as Protection Resource

1. Types of Security Consultants.

1.1. Security consultants can be classified into three major categories: security management consultants, technical security consultants, and security forensic consultants.

1.2. **Security Management Consultants.** Specialise in certain discipline, which comprises the foundation of their expertise.

1.3. **Technical Security Consultants.**

1.3.1. Have specialised subject matter or technical expertise.

1.3.2. Specialize in translating the concepts and functionality provided by the security management consultant.

1.3.3. Also provide management services -writing security procedures & policies.

1.4. **Forensic Security Consultants.**

1.4.1. Deal with investigation, identification and collection of evidence.

1.4.2. Referred as an expert witness in civil lawsuits.

1.5. **Security Advisory Committee.**

1.5.1. Internal resource formed to assist corporate executives & CSO to ensure current security measures are adequate.

1.5.2. Committee is chaired by a project coordinator and reviews the security programme at least **quarterly**.

2. **Selecting a Security Consultant.**

2.1. As a guide, and after defining the scope of work, the following five steps can be used when selecting a consultant:

2.1.1. Step 1: Identify candidates.

2.1.2. Step 2: Invite candidates to submit an application.

2.1.3. Step 3: Evaluate the applications.

2.1.4. Step 4: Interview the top two to three candidates.

2.1.5. Step 5: Negotiate an agreement and finalize the selection.

3. **Consulting Fees & Expenses.**

3.1. The security consulting profession bases fees on a number of factors, including the subject matter, level of expertise required, and geographic region.

3.2. Time and quality must be considered when analysing a range of consulting fees.

3.3. The costs billed by individual consultants as well as by larger firms include direct charges, such as time and travel, and overhead costs, such as office rental, clerical help, proposal expense, publications, and professional taxes and licenses.

3.4. **Fee Options.**

3.4.1. **Hourly Fees.**

- Paying a consultant an hourly fee is most applicable when the assignment is expected to last less than a day, but the exact amount of time needed is unclear. In this scenario, the client

- Forensic consulting is often billed by the hour.

3.4.2. **Daily Fees.**

- Calculated by multiplying the consultant's hourly rate by eight.

- The daily fee can be flexible based on the nature of the task and services required.

3.4.3. **Fixed Fees.**

- A flat or fixed fee is the total amount to be paid by the client to the consultant for the completion of a consulting assignment. Includes all expenses, so only one amount is negotiated.

- Agreed to when the number of days of work can be estimated accurately and controlled by the consultant.

- **Acceptable to a consultant when work to be done is limited to a study that is not complex.**

- **Not recommended when implementing a program.**

3.4.4. **Not to Exceed Fees.**

- Not to exceed pay arrangement, like the fixed fee is consultants guarantee that the total cost or time will be limited to the parameters agreed to in the contract.

- Difference between not-to-exceed and fixed fees is that this arrangement allows for a lesser fee than originally estimated.

3.4.5. Retainers.

- A company that wishes to use a consultant on a regular basis might prefer to pay a retainer.
- In this arrangement, the consultant agrees to work a specified number of days each year for that client, and the client is guaranteed access to the consultant when needed.
- In a retainer agreement, consultants typically provide their services at a substantially discounted rate.

3.5. Expenses.

3.5.1. The cost of outside consultants must allow for reasonable expenses to cover project-related activities such as transportation, living costs, administrative services, and others.

3.5.2. Expenses are usually reimbursed at actual costs. Any limitations on the amount to be spent should be defined.

Chapter – 5: Executive Protection

1. Purpose & Value of EP.

1.1. Defined as the security and risk mitigation measures taken to ensure the safety of individuals who may be exposed to elevated personal risk.

1.2. The most critical distinction of an executive protection agent, compared to a traditional law enforcement or security officer, is that his or her primary goal is to ensure that the protected individual is **kept out of harm's way**-this means not addressing a confrontation head on, but being able to quickly and efficiently get the client out of a harmful situation, and, ultimately, avoiding a harmful situation whenever possible through careful advance planning

1.3. The purpose of executive protection as a program that mitigates risk for an individual or set of individuals can also vary, and executive protection professionals must understand exactly what risks to mitigate.

1.4. EP programs require a **sustainable, pragmatic and flexible** approach to protection.

1.5. The first step in building an executive protection program is assessing the risk to the individual being protected.

1.6. Benefits to executive protection clients that all EP agents should be able to quantify and deliver:

1.6.1. **Security Drivers.** Not only do trained, professional drivers mitigate safety risks to the client, but well-trained drivers and EP agents will properly plan out primary and alternate motorcade routes, study traffic patterns, receive alerts on traffic issues, and know the most efficient drop-off and pick-up points at meetings and events.

1.6.2. **Time management.** By properly planning a client's schedule and path of travel at critical events, conferences, and engagements, the EP agent can maximize the client's time.

1.6.3. **Travel logistics. Advance planning is the most critical** thing an EP agent can do to mitigate the client's risk.. By working with the client's staff to pre-plan all logistics related to travel, and having contingency plans in case something goes

wrong, the client is free to engage in business or personal travel with a total focus on the task at hand-their needs addressed and their risks mitigated.

1.6.4. **Normalcy.** EP agents can help achieve normalcy by knowing how to be discreet and professional, while also managing approaches to their client by members of the public.

2. Domains of Protection.

2.1. **Corporate EP.**

2.1.1. Models: **Full time, Outsourced, Hybrid.**

2.1.2. Initiated because of risk to executive, a business need and need for structure and efficiency to support top executives.

2.2. **Celebrity EP.**

2.2.1. EP professionals with celebrities find themselves challenged with public events.

2.2.2. Greater levels of risk including stalkers.

2.2.3. Celebrity status is achieved through the attention garnered via the media.

2.3. **Government EP.**

2.3.1. All levels of govt have units that provide protection to high profile govt figures.

2.3.2. Key distinction between a protection agent and a Law enforcement officer is that a protection agent's duty is to get the principal out of harm's way, instead of running towards the problem.

2.3.3. Distinction between Private protection details & State Protection details.

<u>Aspect</u>	<u>Private Protection Details</u>	<u>State Protection Details</u>
Authority	No formal authority	Derived from laws & regulations.
Affinity	Private professionals	Sworn Govt officers
Arming	Not always allowable	Lawfully armed
Training	Trained	Trained and certified
Investigation	May be conducted	Certainly conducted

2.4. **Faith Based EP.** Oriented towards persons leading faith based entities/ Religious leaders.

3. Executive Protection Program Management.

3.1. **Third Party Operations.**

3.1.1. Corporates may desire to outsource portions or entire EP program.

3.1.2. Determining which approach an organization takes depends on many factors, including whether the corporate security program has the depth to administer such a program to include recruiting and retaining people within this specialized career and logistical aspects associated with an EP program.

3.1.3. Considerations for vendor evaluation may include reputation, strategic planning support, provision of residential security services, protective surveillance or countersurveillance services, ability to add intelligence services, provision of event security support, and possible investigative.

3.2. **Threat, Vulnerability & Risk Assessment.**

3.2.1. Threat Assessment.

- Threat assessment within the EP community often takes on two definitions. The first is threat assessment associated with proximity to criminal elements such as terrorists, random crimes, etc. The second is in the form of behaviour-based threat assessment applied to persons or groups of concern that have been identified by the protective intelligence function.
- In performing a threat assessment, the enterprise must consider threats associated with persons or groups of concern as well as those risks associated with proximity to random crime.
- Threat assessment for a principal also does not solely consider the risks of harm from violent or criminal activities. A comprehensive assessment evaluates several threat vectors: technical (mobile and cyber systems), reputational, physical, and health and welfare (lifestyle, medical, natural, etc.) attacks.

3.2.2. Vulnerability Assessment.

- Vulnerability assessments within an EP program consider the environments the principal passes through.
- Vulnerabilities are not just inclusive of the security systems designed to protect them.
- Vulnerabilities may include psychological, administrative, technical, and physical aspects as well as external factors such as capabilities of local governments and law enforcement to respond to or migrate criminal activities.

3.2.3. Risk Assessment.

- Two aspects to consider in final determination of an executive's risk profile: ***attractiveness of the target and the likelihood that a threat could succeed.***
- Attractiveness of the target affects the likelihood of attack.
- The threats that the executive faces must be analyzed based on multiple considerations such as the executive's position with the employer, access to and level of exposure among potential adversaries, access to wealth or other lifestyle attributes, publicity, and travel practices.
- A key feature of risk assessments is that they do not last. The level of risk shifts often, so risk assessments must be performed on a recurring basis.
- Risk assessments in the protective environment consider the specific principal's risk as a result of career, public image, lifestyle, current position, and status, as well as family history.

3.3. Metrics & Return on Investments (ROI).

- Metrics data to capture in EP may include the number of threats or other communications, number of principal's public appearances where protestors are present, amount of executive time saved, etc.
- Key performance indicators (KPIs) help keep the EP program focused on what matters, KPIs for EP programs should align with program goals and importance to the program, be understandable to all parties, be measurable and consistent, and be timely.

4. Executive Protection Operations.

4.1. Residential Security Services.

- Residential protection requires a combination of security technology and close protection services provided by trained agents.

- Residential security details are typically operated 24/7, especially at the principal's primary residence.
- Residential security is most successful when incorporating multiple layers of security for redundancy.
- Both the principals and the security team should be on the same page about their actions and reactions in the event of an incident.

4.2. Close Protection.

4.2.1. Security Advances.

- The ability to conduct a thorough, detail-oriented advance plan for the principal's movements is critical to success as an agent and to keeping the principal safe.
- The agent should proactively control the principal's risks.
- **Key Terms for a Security Advance**
- **Advance Team.** The individual or group of individuals who go ahead of the principal and close protection team, to plan and vet the security advance plan according to the vulnerability and risk assessments provided.
- **Vulnerability assessments.** Also known as intelligence reports or risk, threat, and vulnerability assessments (RTVAs). The set of information that lays out the risks and vulnerabilities that must be mitigated with a security plan (i.e., in a location with little to no modern medical capabilities, agents must bring medical support).
- **Site Surveys.** The complete set of information about a site, including room layouts, path of travel for principal, emergency services on site (such as generators, emergency exits, response times for emergency personnel).
- **Path of Travel.** The walking path of the principal upon arrival to each location (i.e. exit vehicle, move down hallway to hold room, proceed to stage left, proceed to stage, exit stage left, proceed to media room, proceed back down hallway to departure area, exit to motorcade).
- **Run of Show.** The schedule/itinerary of any event the principal is attending or featured in.
- **Trip Itinerary.** The full itinerary of the trip if the principal's events involve travel, including flight arrival/departure times; manifests; all event arrival and departure times: guests or individuals included in motorcades.

4.2.2. International Travel Advances.

- Before taking the executive on a trip to another country, the EP team should complete both research from home and advance travel.
- In the pre-travel research, the EP specialist should first determine whether the trip is truly necessary. If it is, the team should pursue the following "know before you go".
- When the trip takes place, the EP specialist should remember a three-part key security concept: **keep a low profile, stay away from problem areas and situations, and know what to do if trouble arises.**
- The EP specialist should also communicate frequently with the security home base.

4.2.3. Close Protection Teams.

- Close protection teams are generally recognized as the group of individuals who provide the final layer of physical protection to principals.
- **Key Terms for Close Protection.**
- **Team Leader.** The individual ultimately responsible for the protection of the principal. The team leader directs the movement of the agents for that day or event.
- **Detail Leader.** The individual responsible for the overall detail, including standards and procedures. Often the team leaders report into the detail leaders.
- **Formations.** Close protection teams will follow certain formations, depending on the location, size of an event, and other factors that may determine how close or far agents need to be from the principal. These formations are generally recognized as – **Box, Diamond, 'V' formation.**
- **"Loose" Protection.** Some situations- such as small, private events or personal vacations where the principal does not want the close protection team to be obvious-require a more discreet style of protection. In these circumstances, the leader may work out a scenario where agents may walk apart from the principal, give the principal a lot of space, or otherwise work in non-traditional formations.
- **Protective Surveillance.** Also known as covert protection, protective surveillance has gained traction in recent years, as either an additional layer of security support to close protection details or a replacement for close protection details. These are distinct from close protection, even those that have "looser" coverage.
- **Security Driver vs. Protection Agent.** While many protection agents are cross-trained, and can double as a driver on a detail, it is important to ensure that one individual is designated as a driver for a particular day and/or assignment, and that the designated driver remains in the driver's position while principals are at an event. This is critical for a quick evacuation in case of an incident. Ensure that the driver is not doing double duty as a close protection agent in an event, or the team will be unprepared for departures and/or emergency evacuations.
- **Choreography.** Choreography used by the EP specialist to physically move about with the subject is called "**working the principal.**"
- The agent should not stand and fight unless there is no alternative.
- Keys to ensuring that close protection teams work well together are:
 - Clear and consistent communication,
 - A standardized level of training,
 - Training together as much as possible,
 - Having clear and consistent security plans that are reviewed before each day, event, or trip.

4.3. Transportation.

4.3.1. Fight Operations.

- High-profile persons prefer to travel on private aircraft.
- Options : Company owned aircraft, leased or share ownership or chartering the aircraft.
- **Fixed base operations (FBOs)**
 - Serve as the executive flight operations facility where personal aircraft may be secured between flights.
 - FBOs are generally operated by **third parties**, although some companies operate expansive flight operations departments and manage their home base FBOs.

- Full service FBOs may provide on-site security, tarmac support, mechanical, repair, catering, and cleaning services.

4.3.2. Driver Services.

- Come in two generic forms - ***chauffeur services and security drivers***.
- Chauffeur services may consist of proprietary drivers or third-party livery companies. A chauffeur differs from the security driver in that chauffeurs are more oriented towards customer service and transporting the passenger efficiently and safely from one destination to the next rather than security concerns.
- It is best to employ a trained security driver and an EP agent as well.

4.4. Special Teams & Digital EP.

4.4.1. Digital EP.

- Digital risk can not only cause stress, financial loss, loss of private information, and reputational risks, it can also lead to physical security risks.
- Principals and progressive protection leaders should be engaging experts to ensure the digital safety of their principal, and have contingency plans if digital safety is compromised, much as they would have emergency evacuation plans for a site.

4.4.2. Technical Security Countermeasures (TSCM).

- Involve the practice of "sweeping" locations for listening devices, and they are derived from government practices for protecting classified Information.
- The close protection leader should work with other stakeholders in the organization to determine the need for TSCM.

4.4.3. K-9 Sweeps.

- The use of security dogs in close protection is typically for the purpose of detecting explosives as a layer of physical protection.
- A close protection team may consider their use as a layer of additional protection at a time of high risk, before an event with significant members of the public (large sporting or concert events); at high-risk locations; or as an ongoing protection measure at places recognized as high-value targets.

Chapter- 6: Security Awareness

1. Security Awareness & Levels of Awareness.

1.1. Security awareness means consciousness of an existing security program, its relevance, and the effect of one's behaviour on reducing security risks.

1.2. While education imparts general knowledge and training develops specific skills, security awareness efforts solicit conscious attention.

1.3. Levels of Awareness.

1.3.1. Executive Management.

- Chief executives, chief operating officers, and other senior personnel must be aware of the security program because they are an enterprise's top decision makers regarding risk and resources.
- For executive management, security awareness means awareness of the security program's financial contribution to the bottom line.

1.3.2. **Middle Management.**

- Middle managers may be held accountable for the success of their individual departments, so they view the security program in terms of its contribution toward that goal.
- Like top managers, middle managers must demonstrate a commitment to the security awareness program and encourage others to follow their example.

1.3.3. **First-line Supervisors.**

- First-line supervisors are typically concerned with specific processes or activities. For these employees, security awareness focuses on how the security program helps or detracts from specific performance objectives.
- In addition, most complaints from other employees about security are first raised with the supervisor and they are the closest connection to employees.
- The company should have training and procedures for the supervisor to recognize the complaint and mitigate or escalate it.

1.3.4. **Individual Employees.**

- Individual employees are crucial to the security of a facility every day. They need to be aware of intruders who might piggyback on their access credentials or use social engineering to glean information from them.
- They must understand that security is everyone's responsibility.
- When supervisors are supportive of security, employees may gain a favourable view of the program and observe its rules.

1.3.5. **Non Employees.**

- Non employees have less opportunity than employees to learn the applicable security requirements, but nevertheless it may be important that they learn at least some of those requirements.
- Nonemployees may be more willing to comply with security procedures if they are given at least a brief or advance explanation of the reasons for the procedures.

2. **Purposes of Security Awareness.**

2.1. Security awareness supports many important goals. Those who receive security awareness instruction are better able to do the following:

2.1.1. **Protect company assets.** The security awareness program enlists all employees in the mission to protect people, property, and other assets.

2.1.2. **Understand the relationship between security and successful operations.** This is a crucial point for upper management to understand.

2.1.3. **Identify their obligations under the security program.** It is important to identify security obligations for all employees and nonemployees.

2.1.4. **Be familiar with sources of help for carrying out security responsibilities.**

Security awareness materials should address the specifics of implementing security requirements.

2.1.5. **Comply with statutory or common-law requirements for notice.** This purpose applies to both employees and nonemployees.

2.1.6. **Comply with regulatory requirements.** Governmental authorities often require that specific security-related information be conveyed to employees and other identified individuals.

3. Engaging Employees to Prevent Losses.

- 3.1. All employees are responsible for helping to protect organizational assets, because security personnel cannot be everywhere and see everything.
- 3.2. An engaged employee is less likely to circumvent security rules and measures.
- 3.3. Most enterprises devote at least some time to fostering security awareness among their employees.
- 3.4. Before developing a security awareness program that will teach employees what they need to know, the security manager must become familiar with all elements of the organization's business-they must know what assets and processes must be protected from what risks.

Chapter – 7: Workplace Substance Abuse

1. Substance Abuse.

- 1.1. A drug is a chemical substance that alters the physical, behavioural, psychological, or emotional state of the user. Drugs of abuse-psychoactive (mind-altering) substances-target the central nervous system and impair the user's ability to think and to process sensory stimuli, thereby distorting the user's perception of reality.
- 1.2. Substance abuse may harm a person physically, mentally, or emotionally.
- 1.3. Abuse often leads to increased tolerance and eventual addiction or chemical dependency.

2. Human Cost of Substance Abuse.

- 2.1. Compared to non-abusing employees, employees who engage in substance abuse are absent from work more often, claim more sickness benefits, and file more workers' compensation claims.
- 2.2. Abusers are also more likely to be laid off or fired.
- 2.3. Substance abuse also breeds dysfunctional relationships.

3. Drug Use in the Workplace.

- 3.1. **Elements for Drug abuse in workplace:** Employees can **rationalize** their ability to use without affecting their productivity, and even make it seem noble and employees spend several hours a day at work, and **opportunities** arise for using, sharing and purchasing illegal substances.
- 3.2. **Rationalization.** Rationalization is the use of superficial, apparently plausible explanations or excuses for one's behaviour.
- 3.3. **Opportunity.** Reasons for opportunity for drug abuse at work place.
 - 3.3.1. **Users know one another.** Workplace deals enable sellers and buyers to have regular contact with one another that is not suspicious.
 - 3.3.2. **Better quality.** Workplace dealers want repeat customers, and they recognize that high-quality products keep them coming back.
 - 3.3.3. **Fairer quantity.** Illegal drugs are expensive. Because drugs are often sold in minuscule quantities, accuracy in weight is important to the buyer.
 - 3.3.4. **Low risk.** Abusers perceive supervisors and managers as uninformed or untrained and often unwilling to confront them or their problems.
 - 3.3.5. **High return on investment.**
 - 3.3.6. **Ability to sell on credit.**

4. **Drugs of Abuse.**

4.1. **Schedule of Drugs.** Legislated by Drug Enforcement Administration (DEA)

<u>Schedule</u>	<u>Potential for Abuse</u>	<u>Medicinal Use</u>	<u>Examples</u>
Schedule - 1	High	No accepted use	Marijuana, Heroin, LSD
Schedule - 2	High	Use with restrictions	Cocaine, Morphine, Opium
Schedule - 3	Less use from 1 & 2	Accepted use	Codeine, Tylenol, Benzphetamine
Schedule - 4	Lesser in comparison	Accepted use	Darvon, Darvocet, Valium
Schedule - 5	Lesser in comparison	Accepted use	Cold & Pain medicines

4.2. **Categories of Drugs.** Depressants / Narcotics / Stimulants / Hallucinogens / Marijuana / Analogous / Prescription drugs.

4.2.1. **Depressants.**

- In small doses, depressants produce a calm feeling and can be used for various medical purposes, such as inducing sleep, relieving anxiety and muscle spasms, and preventing seizures.
- In larger doses, they can cause impaired reflexes, slurred speech, loss of motor coordination, and uncontrollable drowsiness.
- Abusers often combine depressants with other depressants or with stimulants. The abuse of depressants can lead to birth defects, overdose, and even death.
- Depressants include such drugs as benzodiazepines, barbiturates, and sedatives. Some well-known examples are Valium, Quaalude, Xanax, Lunesta, Nembutal, and Seconal.

4.2.2. **Alcohol**

- Alcohol is also classified as a depressant.
- Alcohol is a fast-acting central nervous system depressant that functions as an analgesic with sedative affects.
- In small quantities, it produces a sense of well-being and slightly impaired reflexes. In larger quantities, the sense of well-being is replaced by disorientation, reduced inhibition, loss of coordination, and irrationality.
- Alcohol dependence, also known as alcoholism, includes four symptoms:
- **Craving:** a strong need or compulsion to drink;
- **Loss of control:** the inability to limit one's drinking;
- **Physical dependence:** the occurrence of withdrawal symptoms, such as nausea, sweating, shakiness, and anxiety, when alcohol use is stopped after a period of heavy drinking;
- **Tolerance:** the need to drink greater amounts of alcohol to get the desired feeling.

Alcoholics are in the grip of a powerful craving that overrides their ability to stop drinking.

- This essential difference between a social drinker and an alcoholic is a loss of **control over the time, place, and amount of drinking**.

4.2.3. **Narcotics**

- In small doses, narcotics create effects like those of depressants.
- In larger doses, they induce sleep, unconsciousness, and vomiting. A large dose may cause severe respiratory depression that can lead to death.
- With repeated use of narcotics, tolerance and dependence develop. **Tolerance** is the need to consume larger doses to attain the desired effect.
- **Dependence** is an alteration of normal body functions such that the continued presence of a drug is needed to prevent withdrawal symptoms.
- In the medical sense, narcotics are opiates: opium, its derivatives, and synthetic substitutes.
- Opiates (also called opioids) are indispensable in pain relief, but they are also highly addictive and frequently abused.
- Examples: morphine, heroin, and codeine.
- Usually taken orally or intravenously, they can also be smoked.

4.2.4. **Stimulants**

- Stimulants may make employees appear more alert, eager, and productive.
- Abusers experience frequent, severe mood swings, and they become difficult to manage and have trouble getting along with others.
- Prolonged abuse typically results in weight loss, drug-induced psychosis, and addiction to multiple drugs.
- Examples: cocaine, amphetamines, methamphetamine, methcathinone, methylphenidate (Ritalin), and anorectic drugs (appetite suppressants).

4.2.5. **Cocaine**

- Cocaine (cocaine hydrochloride) is a white, crystalline substance extracted from the coca plant.
- Most often ingested through the nose (snorted), it can also be injected or smoked.
- Cocaine stimulates the central nervous system, and its immediate effects include dilated pupils, elevated blood pressure, increased heart rate, and euphoria.
- Crack or rock cocaine (usually smoked) is prepared from powdered cocaine, baking soda, and water.
- Small dose of cocaine makes the user feel euphoric, energetic, talkative, and alert.
- Large doses intensify the user's high but may also lead to bizarre, erratic, or violent behaviour, along with tremors, vertigo, muscle twitches, paranoia, or a toxic reaction. Cocaine-related deaths are often a result of cardiac arrest or seizures followed by respiratory arrest.
- **Bingeing** — that is, taking the drug repeatedly and in increasing doses—may lead to irritability, restlessness, and paranoia.

4.2.6. **Methamphetamine**

- A synthetic drug easily manufactured using common materials and simple laboratory equipment.
- Also known as crank, meth, crystal meth, or speed.

- Methamphetamine can be smoked, snorted, swallowed, or injected.
- Smoking or injecting it gives an intense rush or "flash" that lasts only a few minutes and is described as extremely pleasurable.
- Snorting or swallowing produces euphoria- a high but not an intense rush.

4.2.7. **Hallucinogens**

- Mind-altering drugs that drastically affect users' mood, sensory perception, and ability to reason.
- The most commonly abused hallucinogens are **LSD (lysergic acid diethylamide), also called acid; MDMA (methylenedioxymethamphetamine), also called ecstasy; PCP (phencyclidine), often called angel dust;** mescaline, which comes from the peyote cactus; and certain mushrooms.
- Users often experience vivid hallucinations, panic attacks, and even synaesthesia or sensory crossover.

4.2.8. **Marijuana**

- Second most common drug of abuse in the workplace.
- Small dose, marijuana produces effects similar to those of alcohol, and it is often substituted for alcohol by recovering alcoholics.
- In larger doses, marijuana can cause hallucinations, memory loss, and lethargy.
- Marijuana, hashish, and hash oil are all derived from the hemp plant, cannabis sativa.
- The principle psychoactive component, tetrahydrocannabinol or THC, is retained in the fatty tissue of the body. Because THC is not easily eliminated, it can accumulate. As a result, the user becomes less and less tolerant of the drug and steadily requires less of it to achieve the desired effect. This condition is known as **reverse tolerance**.

4.2.9. **Analogue or Designer Drug**

- An analogue, also known as a designer drug, is a synthetic preparation with effects and characteristics similar to those of a natural substance.
- Developed in laboratories but, being different in formation from the substance they imitate, are not initially classified as controlled substances-even though the imitated substance may be.

4.2.10. **Prescription Drugs**

- Those most often abused are stimulants and sedatives. They may be prescribed by physicians but then overused or continued when no longer needed.
- The most common prescription drugs sold at work belong to the family of drugs known as benzodiazepines, which are depressants designed to relieve anxiety, tension, and muscle spasms. Librium, Xanax, and Valium are some of the more common benzodiazepines found in the workplace.

5. **Addiction & Chemical Dependence.**

5.1. **Addiction** - The disease of obsession & compulsion

5.2. **Stages** - *Increased Tolerance, Rationalization, Obsession*

5.3. **Chemical Dependency**

5.3.1. An integral component of addiction

5.3.2. Physiological craving brought on by chemical changes in the body, mental and physical

- 5.4. **Denial** - Refusal to believe that the behavior is harmful
- 5.5. **Codependency** - Allowance of behavior of others to overshadow their own values
- 5.6. **Dependence** - Normal body functions requiring the presence of a drug to prevent withdrawal
- 5.7. **Tolerance** - The need to consume larger doses for the same effect

6. Role of Supervisors & Managers.

6.1. **Drug free Workplace Policy.**

- 6.1.1. The policy must be practical, functional and enforceable. It Should also be written, effectively communicated, acknowledged in writing by every employee, and equitably enforced.
- 6.1.2. The policy should avoid the term "under the influence." Only for alcohol is there a legal definition of "under the influence." No such standard exists for the other drugs of abuse.

6.2. **Investigation & Documentation.**

- 6.2.1. When employees violate company policy, management must respond swiftly and effectively.
- 6.2.2. A workplace investigation is a fact-finding process, ideally separated from the decision-making process.
- 6.2.3. Workplace investigations must not violate the law, company policy, labour agreements, or anyone's right to privacy. They **must also be confidential**.
- 6.2.4. The findings of a workplace investigation do not call for discipline. In such cases, the most appropriate response for supervisors and managers is **intervention**.

6.3. **Intervention.**

- 6.3.1. Intervention is the calculated interruption of the destructive behaviours of a substance abuser and those around that person.
- 6.3.2. **Intervention is not discipline.** It is a caring behaviour in which those involved plan, prepare, and act.
- 6.3.3. For intervention to be effective, employee performance must be documented.
- 6.3.4. **Steps by Supervisors** - Document performance, Confront, Discuss, Follow up.
- 6.3.5. **Intervention Failure** - Oral & Written warnings, suspension, Termination.

7. Drug Testing.

7.1. **Methods.**

- 7.1.1. Drug testing is a scientific examination of a biological specimen for the presence of a specific drug or its metabolite (a chemical by product left behind after the body metabolizes the substance).
- 7.1.2. Most Common specimen analysed - Urine. Blood, Hair and saliva may also be tested.
- 7.1.3. Urine testing is preferred because collection is not considered intrusive (that is, the body does not need to be punctured to collect the specimen as it is in the drawing of blood).
- 7.1.4. If the preliminary test discovers a drug or its metabolite, a confirmatory test is performed.

7.1.5. Confirmatory tests typically use advanced technologies that are more accurate. They identify both the type of drug or metabolite present and its concentration.

7.2. Accuracy.

7.2.1. Drug testing is extremely accurate.

7.2.2. A very small percentage of tests may result in a false positive, but confirmatory tests are performed in those cases.

7.3. Strategy.

7.3.1. For which substance the test be conducted- Alcohol & Five controlled substances.

7.3.2. When should the testing be performed- Pre employment/ Random.

7.3.3. What type of testing should be conducted – Type of sample.

7.3.4. Who should be tested - All workers/ safety sensitive workers.

7.3.5. Who should collect the samples – Qualified/ Licensed medical professionals

7.3.6. Where should the samples be collected – Job Site/ Medical lab.

7.3.7. Who should receive the test results – Employer.

Chapter -8: Workplace Violence (WPV) Prevention

1. WPV Sources & Types.

1.1. WPV can encompass any type of threatening disruptive behaviour, including overt acts of violence (i.e., homicide, robbery, physical assault, etc.), threats of these acts, and/or other physical or verbal conduct that creates a reasonable concern of violence against employees (i.e., harassment, intimidation, bullying, etc.).

1.2. **Sources:** Threats and the risk can emanate from either internal or external agents.

1.3. Organizations have an obligation to provide a safe workplace.

1.4. The foundation of a WPV program is **Risk Assessment**.

2. Types of Offenders.

2.1. **Type 1.** Has no legitimate relationship to the organization and has criminal intent-for example, robbers and trespassers.

2.2. **Type 2.** Has a legitimate relationship with the organization-for example, a client, customer, patient, visitor, or service provider (delivery person).

2.3. **Type 3.** Is a current or former employee of the organization, including a contractor

2.4. **Type 4.** May or may not have a relationship with the organization but has a perceived or real personal relationship with an employee-for example, a domestic partner or ex-spouse.

2.5. **Type 5.** Has an ideological, political, or religious view in opposition to the organization-for example, extremist individuals or terrorists.

3. Warning Signs.

3.1. Stressful behavior

3.2. Identification & reporting of unusual behavior / symptoms

3.3. Communicate to security, supervisor & HR

4. **WPVI Program.**

- 4.1. Organizational commitment & policy
- 4.2. Design the program and establish its plan for implementation
- 4.3. Issued from the desk of CEO
- 4.4. Communicated to employees : Pre & post employment
- 4.5. WVPI Policy Working Group - Cross functional group
- 4.6. Risk Assessment : Existing security resources, policies, Assessment of security officers
- 4.7. Awareness & Training
- 4.8. Monitoring & response by *Threat Management Team (TMT)*
- 4.9. **Three levels of assessment for known aggressors**
 - 4.9.1. *Initial* ("triage" - determine if immediate response is required)
 - 4.9.2. *Threshold* - determines if action is required, or just monitoring
 - 4.9.3. *Comprehensive*

5. **Special Cases.**

5.1. ***Intimate Partner Violence.***

- 5.1.1. When an employee is in an abusive relationship, violence can spill over into the workplace, making the personal problem into the organization's problem.
- 5.1.2. Some responses may include:
 - Limiting the suspected abuser's access to the workplace;
 - Escorting the employee to his or her car;
 - Changing the employee's workplace email address and workplace phone number;
 - Moving the employee to a secure work location; and
 - Referring the employee to outside resources for assistance with personal safety issues.

5.2. ***Employee with Behavioural or Mental Disorder.***

- 5.2.1. An employee who exhibits symptoms of a behavioural or mental disorder may seem to be a risk to the safety of others.
- 5.2.2. The organization should consult legal counsel to determine employer obligations, because governmental regulations may protect employees with certain disabilities.
- 5.2.3. Options the TMT may wish to pursue include encouraging the employee to seek medical attention, possibly placing the employee on medical leave, and performing a fitness-for-duty examination, if the organization requires it.

5.3. ***Separation of Employment.***

- 5.3.1. The separation should be consistent with the organization's established practices and policies addressing the concern for violence and obtaining legal advice to ensure compliance with applicable laws.
- 5.3.2. Short- and long-term security measures may be appropriate for safeguarding the facility and employees.
